

Beckman Troponin Algorithm

¹ Reference Interval

- Male: 5-20 ng/L
- Female: 5-12 ng/L

² Risk Scores (e.g., EDACS, HEART)

- Low risk: Heart Score 1-3, EDACS ≤ 15
- High risk: Heart Score 4-6, EDACS ≥ 16

³ NPV >99%

⁴Significant Delta (at least one HST must be elevated for rules to apply):

2h Δ ≥ 20 ng/L or 20%

4h Δ ≥ 20 ng/L or 20%

- All deltas are calculated from baseline HST
- If onset of CP > 12 hours may be at plateau phase
- Negative deltas are also indicative of acute injury
